

HSE MW05 COMPLIANCE

“The service has given myself and the company confidence that we are keeping our staff safe, our tooling in good order and are HSE MW05 compliant”

Paul McCredie, QHSE MANAGER

GOALS AND NEEDS

We had become aware of the requirements of HSE regarding metalworking fluids (MWF) and the potential risks to our staff.

We wanted to ensure our handling and use of coolants and biocides were in full compliance with HSE guidelines and ensure we maximise the lifespan of our tooling equipment.

SOLUTION

Through their onsite training and testing facilities, Pennine Lubricants offered us a cost effective solution to meet our MWF management needs.

We wanted to be in control of testing the coolant ourselves, and needed our production staff to fully understand the issues that could arise and how to undertake any required remedial actions. So Pennine delivered PROCARE Fluid Management training to our team on site.

OUTCOME

With very little effort on our part, our staff understand the why, what and how of managing our fluids.

Due to the training given by Pennine, our staff are fully engaged with our fluid management regime. The results are presented to our production staff, so they can action any areas of concern immediately and the fluid results also act as documented records of the condition of our fluids and how we manage them.

BENEFITS

- PROCARE Self-Serv was easy to implement
- Pennine supported operatives with full training
- Operatives have the knowledge to complete any necessary remedial actions
- PROCARE Self-Serv is proving to be a very cost effective solution

As a company, we now have confidence that we are keeping our staff safe, our tooling in good order and are in compliance with HSE guidance regarding MWF management.
